EDUCATION

Binghamton University, State University of New York

M.S. in Computer Science

Binghamton, NY

Jan 2025 – Dec 2026

Relevant Coursework: *Computer Networks, Introduction to Computer Security, Science of Cybersecurity, Systems Programming, Database Systems, Design & Analysis of Algorithms*

SRM Institute of Science & Technology

B.Tech in Computer Science & Engineering (Cyber Security) — **CGPA:** 8.8/10

Chennai, India

2021 – 2025

Relevant Coursework: *Information Assurance and Security, Penetration Testing & Vulnerability Assessment*

TECHNICAL SKILLS

Programming: Python, C, C++, SQL, JavaScript

Cybersecurity: Web Security, Vulnerability Assessment, SQL Injection, XSS, CSRF, Buffer Overflow, Privilege Escalation, Input Validation

Networking: TCP/IP, TCP Sockets, HTTP/HTTPS, DNS, Routing & Switching, Network Protocols

Systems: Linux, Linux Kernel Modules, Memory Management, Multithreading, POSIX Threads, System Calls, File I/O, Signal Handling

Security & Development Tools: Nuclei, OWASP ZAP, Docker, Git, GitHub, GCC, Make, VS Code

Databases/Web: PostgreSQL, MongoDB, Django, REST APIs, HTML/CSS

PROFESSIONAL EXPERIENCE

JavaScript Developer Intern

Jun 2023 – Dec 2023

iByteCode Technologies, Chennai, India

- Built reusable JavaScript UI components aligned with internal standards to improve maintainability and speed up feature delivery.
- Developed an Angular CRUD application with dynamic data binding and form validation, enabling reliable create, read, update, and delete workflows.
- Integrated frontend modules with backend REST APIs and debugged end-to-end data-flow and state issues across client-server boundaries.

PROJECT EXPERIENCE

Kernel Buffer Overflow — Attack & Defense (Independent Project)

2025

Technologies: C, Linux Kernel Modules, Kernel Memory Management, GCC, Make

- Implemented a vulnerable Linux kernel module in C and reproduced buffer-overflow-based privilege escalation in a controlled environment to analyze kernel memory vulnerabilities.
- Designed and evaluated bounds checking, input validation, and stack-canary mitigations, benchmarking latency overhead through micro-tests.

Encrypted File Transfer Tool — Client-Server System (Group Project)

2025

Technologies: C, TCP Sockets, POSIX Threads, Linux, File I/O, XOR Cipher

- Implemented a TCP client in C to encrypt and transmit files with metadata, dynamic buffer management, partial-send handling, and server acknowledgments.
- Managed dynamic file buffers and binary file I/O while developing shared socket, signal-handling, directory-management, and error-handling utilities.

Automated Web Vulnerability Scanner (Group Project)

2024

Technologies: Python, Django, HTTP, HTML/CSS, Nuclei, OWASP ZAP

- Built a Django application integrating Nuclei and OWASP ZAP to automate web vulnerability scanning through a user-facing interface.
- Processed scanner outputs into severity-based findings and risk levels, generating structured results and downloadable security reports.

LEADERSHIP EXPERIENCE

Treasurer, CS Graduate Student Organization (CS-GSO)

2025 – 2026

SUNY Binghamton

- Managed CS-GSO budgeting, expense tracking, and reimbursements to support student events and organizational operations.
- Provided technical support for CS-GSO events, including AV setup, presentation systems, and on-site troubleshooting.
